

SAVE THE DATE

4th Biennial CALFED Bay-Delta Program Science Conference 2006 **Making Sense of Complexity: Science for a Changing Environment**

OCTOBER 23-25, 2006
Sacramento Convention Center

CALFED
BAY-DELTA
PROGRAM

The Biennial CALFED Bay-Delta Program Science Conference is a forum for presenting scientific information and ideas relevant to the Program's goals and objectives in the Bay-Delta and its watersheds.

The organizers of this 4th Science Conference will be seeking presentations in all four of CALFED's program areas: **ecosystem restoration, levee system integrity, water quality, and water supply reliability.**

The conference program will feature both poster and oral presentations that describe scientific advances in ecosystem restoration and improving levee system integrity, water quality, and water supply reliability. The primary goal of the conference is to make new information (i.e. results, models, syntheses, analyses) available to the broad community of scientist, engineers, managers, and stakeholders working on Bay-Delta program-related issues.

All participants who wish to make a presentation (poster or oral) at the Science Conference will be required to submit an abstract. The Call for Abstracts will be issued in March 2006, and all abstracts will be due June 2, 2006. Proposals for **special oral sessions** and **special poster sessions** will be accepted at the same time as presentation abstracts with the same deadline. More information will be included in the forthcoming Call for Abstracts. More information about the conference will be posted on the CALFED web site as it becomes available (<http://science.calwater.ca.gov/conferences/conferences.shtml>).
